

#G154

NEW!

## Carbon rear shock tower for IF15.

Option part for IF15

New rear shock tower features a body mounting position 3.5mm lower than std, contributing to a lower center of gravity. By using T266 Alu HBP mount (black/2pcs) it is also possible to utilize horizontal style body mounting style. The shock mounting positions have been reduced to 3 offering increased strength and crash resistance.

#G154: REAR SHOCK TOWER (Standard/Carbon)

#G160

NEW!

Option part for IF15/IF15W

Developed based on team driver feedback. Carbon camber plate (G159) that can be adjusted in a diagonal direction that incorporates the latest setups for the IF15. In addition, the A-arm type camber link enhances rigidity and is a set of parts that greatly support rear grip. The bottom hole is the same as original hole 2 (lower), the more you raise it, the more calm the rear will be. (Part of the outer ball end needs to be cut)

G160: REAR A-ARM SET (Slant)

#G159

NEW!

Option part for IF15/IF15W

Developed based on team driver feedback. A new carbon camber plate that can be adjusted in fine steps. The diagonal direction of the holes incorporates the latest setups for the IF15. The bottom hole is the same original hole 2 (lower), the more you raise it, the more calm the rear will be. (Part of the outer ball end needs to be cut)
